

Trina Bioreactives AG - Quality Policy

TRINA Bioreactives AG is committed to delivering quality in the context of cost and stable supply chain management. Most of the products in the IVD industry have a substantial part of “inner quality” which is not tested but relies on trust and professional supply chains.

TRINA Bioreactives AG maintains a quality-focused culture to ensure a high priority is placed on the traceability, the safety, and the reliability of products.

Our ISO 13485:2016 certification is part of our quality policy which does focus on these main principles:

- Department leaders ensure that processes and procedures are in place that directly affect the quality of products.
- All Trina Bioreactives AG employees have the adequate training, education, skills and experience to conduct their work competently and in accordance with regulations and Trina's quality policy.
- Supply Chain quality: On time delivery of products and services that match our customers' manufacturing and R&D planning.
- Cost quality: Stable, reliable and predictable cost, which can be scaled according to the customer's process.
- Maintaining robust supplier control and development to ensure stable raw material quality and predictable supply chains.
- Ensuring compliance to requirements and the proper functioning and continuous improvement of the QM system.
